

IACBOX Lite Version

Simple and inexpensive security and control for your hotspot!

The typical use case of the Lite version are small hotels and guest houses, restaurants, cafes, retail stores and public spaces. This lightweight package of modules and options is reduced to the most needed, **hence all the more cost-effective.**

If you can do without database connections, ticket mass production or online payment methods, then the **Lite version is most probably your best pick.** It allows to take up to 250 concurrent users/devices online, configure the login page according to your ideas and enable registration via Facebook or Google. Create a voucher with password using a printer. And with the optional **Privacy Toolkit** module, your IACBOX will support you in terms of data protection.

The Lite version is available as Software- or Virtual appliance for 25, 50, 75, 100, 175 and 250 concurrent users/devices. **Each of them can be converted whenever needed to a Full version.** We supply compatible hardware in the EU & EFTA area.

Software Maintenance is to renew every year by order, only the first year is mandatory.
