

IACBOX Classroom edition

Digitalization has fully taken hold of schools, and learning portals, online communication and mobile devices are currently in demand as never before. Money is also being spent on this: Austria wants to use tablets for students across the board as early as fall/winter 21/22, and after school 4.0 from 2017 now comes an 8-point plan, which is endowed with 200 million euros and provides, among other things, fiber-optic connections and WiFi infrastructure in schools. Germany is promoting such measures with the Digital Pact for Schools, and many others are pursuing similar plans, and not just in Europe.

In line with these plans, the IACBOX is an ideal solution, facilitating the administration of online access for students, teachers and devices, ensuring secure login, intelligently managing available bandwidth and providing the ability to control applications by protocol, such as restricting or not allowing streaming or gaming services. Each school can also make its login page uniquely identifiable and direct its users to important content. The Classroom edition premium package is designed to turn a IACBOX Full license of any size into a custom solution for your school or educational Institution.

This is what the Classroom edition offers:

- Application Control PRO regardless of license size
- Privacy Toolkit
- School-specific ticket templates filterable per class
- Web-based admin access for IT administrators
- WebAdmin user with detailed instructions for teachers
- Additional -10% EDU discount on the license price
